

CyberAwareGaza

Google Stitch - Master UI/UX Design Specification

Use this document together with the attached CyberAwareGaza logo image.

1. Master Instruction to Google Stitch

Design a complete, polished, responsive web experience for **CyberAwareGaza**, an academic cybersecurity awareness and risk-evaluation platform. The design must feel like a real modern product, not a Google Form, survey template, generic admin panel, or hacker-themed landing page.

- Use the attached CyberAwareGaza logo image as the official brand reference. Do not redesign the logo, change its shape, recolor it, or replace it with a generic shield/lock icon.
- The platform must support English and Arabic as two complete interface modes. English uses LTR layout; Arabic uses full RTL layout. Do not display both languages simultaneously on normal screens; use a clear language switcher.
- Do not invent, rewrite, shorten, translate, or 'improve' the eight scenario questions or their answer options. Use the exact bilingual wording supplied later in this document.
- Design both the participant-facing experience and a separate administrator portal.
- Prioritize modern UX, accessibility, clarity, academic credibility, calm visual hierarchy, and mobile-first responsive behavior.
- The assessment screens must not reveal which answer is correct before final submission. Avoid green/red correctness cues during question answering.
- Use realistic placeholder values only for previewing dashboards. Never present placeholder statistics as actual research results.

2. Product Identity and Brand Direction

Product name: CyberAwareGaza

Brand personality: Technical, secure, academic, modern, trustworthy, calm, and professional.

Primary background: Warm off-white #F7F6F2

Card surfaces: White #FFFFFF

Primary navy: #132A3A

Teal accent: #159A9C

Main text: #1D2935

Secondary text: #66727D

Soft borders: #E7E7E2

English font: Inter

Arabic font: Noto Sans Arabic or IBM Plex Sans Arabic if available in the design environment.

Logo Usage

- Header: use the complete horizontal CyberAwareGaza logo.
- Mobile compact header and favicon: use the symbol portion of the same logo without modifying the symbol design.
- Admin login: show the full logo centered above the login card.
- Keep generous clear space around the logo. Do not place it on busy imagery.

3. Visual System and UI Style

The visual language should use warm off-white page backgrounds with elevated white cards, subtle borders, and soft shadows. The interface should feel premium but restrained.

Element	Design Direction	Notes
---------	------------------	-------

Page background	#F7F6F2 warm off-white	Avoid pure white full-page backgrounds.
Cards	FFFFFF, 18-22 px corner radius	Soft elevation and plenty of whitespace.
Card shadow	Soft navy-tinted shadow	Example feel: 0 8px 30px rgba(19,42,58,0.08).
Primary button	Navy #132A3A	White text, clear hover/focus state.
Accent/progress	Teal #159A9C	Use selectively, not everywhere.
Selected answer	Very light teal tint + teal border	Do not indicate correctness.
Typography	Inter / Arabic sans	Readable, not futuristic decorative fonts.

4. Global UX Rules

- Mobile-first: the participant assessment must be effortless on a phone with one-handed tap targets.
- One scenario per screen. Never show all eight questions in one long page.
- Use a visible progress indicator such as 'Scenario 3 of 8' plus a thin teal progress bar.
- Answer choices should be full-width selectable cards with generous spacing.
- During the assessment, selected answers may receive teal highlighting, but never 'Correct', 'Wrong', green, or red feedback.
- Preserve the user's current language throughout the entire session.
- Use clear keyboard focus states, sufficient contrast, large touch targets, and readable line lengths.
- Use concise motion: subtle transitions between scenarios; no distracting animations.
- Avoid dark hacker aesthetics, neon green, binary-code backgrounds, skulls, generic shield-lock artwork, or excessive gradients.

5. Information Architecture / Sitemap

- Public Landing Page
- Participant Entry Modal / Page
- Consent Page
- Assessment Instructions
- Scenario 1
- Scenario 2
- Scenario 3
- Scenario 4
- Scenario 5
- Scenario 6
- Scenario 7
- Scenario 8
- Assessment Submission / Processing State
- Participant Result Page

- Detailed Answer Review / Learning Feedback
- Admin Login
- Admin Dashboard
- Participants / Assessments Table
- Participant Assessment Detail
- Scenario Analytics
- Data Import / Export
- Admin Settings

6. Participant Journey - Exact Page-by-Page Design

6.1 Landing Page

- Top header: full CyberAwareGaza logo on the left in English layout and on the right in Arabic RTL layout; language switcher on the opposite side.
- Hero title: 'Assess Your Cybersecurity Awareness' / 'قَيِّم وعيك بالأمن السيبراني'.
- Short supporting text: explain that the experience presents eight everyday cybersecurity situations and provides a personal awareness-risk result.
- Small trust indicators: '8 Scenarios', 'About 5 Minutes', 'Name Optional'.
- Primary CTA: 'Start Assessment' / 'ابدأ التقييم'.
- Secondary unobtrusive link: 'How it works' / 'كيف يعمل؟'.
- Use the warm off-white background with one strong white hero card or a clean split layout. Do not make the page look like an advertisement.

6.2 Participant Entry

Before the assessment begins, show a focused white card/modal with:

- Title: 'Welcome to CyberAwareGaza' / 'مرحبًا بك في CyberAwareGaza'.
- Supporting copy: 'Enter your name if you want it to appear with your result, or continue anonymously.'
- Optional text field labelled 'Name (Optional)' / 'الاسم (اختياري)'.
- Primary button when a name is entered: 'Continue' / 'متابعة'.
- Secondary button: 'Continue Anonymously' / 'المتابعة دون ذكر الاسم'.
- Every participant must receive an automatically generated identifier such as CAG-0001, CAG-0002, etc., regardless of whether a name is entered.
- If no name is provided, display 'Anonymous' with the generated ID throughout the admin portal.

6.3 Consent Page

Use a clean consent card. The participant must make an explicit choice before proceeding.

Question:

Do you voluntarily agree to participate in this research questionnaire?

هل توافق طوعًا على المشاركة في هذا الاستبيان البحثي؟

- Yes, I agree. / نعم، أوافق.
- No, I do not agree. / لا، لا أوافق.

If the user selects 'No', do not start the assessment. Show a respectful exit message and a Return Home button.

6.4 Assessment Instructions

- Title: 'Cybersecurity Awareness Assessment' / 'تقييم الوعي بالأمن السيبراني'.

- Explain that there are eight scenarios and the participant should choose what they would most likely do in real life.
- State that there is no need to enter any real password, verification code, university credentials, or other sensitive information.
- Primary CTA: 'Begin Scenario 1' / 'ابدأ السيناريو 1'.

7. Exact Assessment Content - Do Not Modify

IMPORTANT FOR STITCH: The following scenario wording and answer options come from the supplied questionnaire. Preserve the text exactly. The website may display either the English or Arabic version depending on the selected interface language, but the wording must not be rewritten.

Scenario 1

English question text:

You received an email that looks like it came from the university Moodle system. It says:

"Your account will be suspended within 2 hours unless you verify your login now."

The email includes a "Verify Account" button.

Arabic question text:

استلمت رسالة بريد إلكتروني تبدو وكأنها صادرة من نظام مودل الخاص بالجامعة، وتقول :

«سيتم إيقاف حسابك خلال ساعتين ما لم تقم بتأكيد تسجيل الدخول الآن.»

وتحتوي الرسالة على زر "تأكيد الحساب".

What would you do / ماذا ستفعل؟

Answer options:

- Click the button and login immediately. | الضغط على الزر وتسجيل الدخول فورًا.
- Open the official Moodle website manually and check notifications. | فتح موقع مودل الرسمي يدويًا | والتحقق من الإشعارات.
- Ignore without reporting. | تجاهل الرسالة دون الإبلاغ عنها.

Scenario 2

English question text:

A WhatsApp message in a class group says:

"New lecture notes uploaded. Download quickly before it gets deleted!"

It includes a shortened link.

Arabic question text:

تصل رسالة في مجموعة الصف على واتساب تقول:

«تم رفع ملاحظات جديدة للمحاضرة. حملها بسرعة قبل أن يتم حذفها!»

وتحتوي الرسالة على رابط مختصر.

What would you do / ماذا ستفعل؟

Answer options:

- Open the shortened link immediately. | فتح الرابط المختصر فورًا.
- Access resources from the official LMS directly. | الدخول إلى المصادر مباشرة من نظام إدارة التعلم الرسمي.
- Ask sender for official LMS link. | طلب الرابط الرسمي لنظام إدارة التعلم من المرسل.

Scenario 3

English question text:

You received an email that appears to be from your instructor asking you to confirm your student ID and reset your password using an attached file.

Arabic question text:

استلمت رسالة بريد إلكتروني تبدو وكأنها من مدرّسك، وتطلب منك تأكيد رقمك الجامعي وإعادة تعيين كلمة المرور باستخدام ملف مرفق.

What would you do / ماذا ستفعل؟

Answer options:

- Open attachment and follow instructions quickly. | فتح الملف المرفق وتنفيذ التعليمات بسرعة.
- Verify through official Moodle/department contact first. | التحقق أولاً من خلال نظام إدارة التعلم الرسمي أو التواصل المباشر مع القسم/المدرّس.
- Reply to the email and proceed if they reply. | الرد على البريد الإلكتروني والمتابعة إذا قام المرسل بالرد.

Scenario 4

English question text:

Which of the following passwords do you consider the strongest for a university account?

Arabic question text:

أي من كلمات المرور التالية تعتقد أنها الأقوى لاستخدامها في حساب جامعي؟

Answer options:

- Ahmed@Gaza2026!
- Mohammed2026!
- 123456789012
- ahmed1234567

Scenario 5

English question text:

You get an email:

"Your grades have been updated. Click here to view your grades ."

The email includes a "View Results" button and asks you to sign in after clicking it.

Arabic question text:

تستلم رسالة بريد إلكتروني تقول:

«تم تحديث درجاتك. اضغط هنا لعرض درجاتك.»

تحتوي الرسالة على زر "عرض النتيجة" وتطلب منك تسجيل الدخول بعد الضغط عليه.

What would you do / ماذا ستفعل؟

Answer options:

- كتابة عنوان الموقع الرسمي يدويًا والتحقق | Type official website URL manually and check grades there. من الدرجات من خلاله.
- الضغط على الرابط لأن الدرجات مهمة | Click the link because grades are important.
- إعادة توجيه البريد الإلكتروني للأصدقاء لتحذيرهم | Forward email to friends to warn them.

Scenario 6

English question text:

An email says:

"Please review the attached invoice."

The attachment name is:

Invoice.pdf.exe

Invoice.pdf.exe

Arabic question text:

تصل رسالة بريد إلكتروني تقول:

«يرجى مراجعة الفاتورة المرفقة.»

واسم الملف المرفق هو:

What would you do / ماذا ستفعل؟

Answer options:

- الإبلاغ عنه إلى مسؤول تقنية المعلومات/الأمن وعدم | Report to IT/security and do not open attachment. فتح الملف المرفق.
- فتح الملف المرفق لمعرفة محتواه | Open the attachment to check what it is.
- حذف البريد الإلكتروني فورًا | Delete the email immediately.

Scenario 7

English question text:

On campus, you connect to a Wi-Fi network and a page opens asking you to login with your university credentials, but the page design looks slightly different.

Arabic question text:

أثناء وجودك في الجامعة، تتصل بشبكة الواي فاي وتظهر صفحة تطلب منك تسجيل الدخول باستخدام بيانات حسابك الجامعي، لكن تصميم الصفحة يبدو مختلفاً قليلاً عن المعتاد.

What would you do / ماذا ستفعل؟

Answer options:

- Disconnect and ask IT/official staff for the correct Wi-Fi name/portal. | قطع الاتصال وسؤال مسؤول تقنيّة المعلومات أو موظف رسمي عن اسم الشبكة وصفحة الدخول الصحيحة.
- Enter credentials because you need internet quickly. | إدخال بيانات تسجيل الدخول لأنك تحتاج إلى الإنترنت بسرعة.
- Use mobile hotspot instead. | استخدام نقطة اتصال الهاتف بدلاً من ذلك.

Scenario 8

English question text:

You receive a message:

"We are verifying your account. Reply with the code you just received."

You indeed received a verification code on your phone.

Arabic question text:

تستلم رسالة تقول:

«نقوم بالتحقق من حسابك. أرسل لنا رمز التحقق الذي وصل إليك للتو.»

وبالفعل، وصل إلى هاتفك رمز تحقق.

What would you do / ماذا ستفعل؟

Answer options:

- Share the code to finish verification. | مشاركة الرمز لإكمال عملية التحقق.
- Do not share; login to official site manually and review security settings. | عدم مشاركة الرمز، والدخول يدويًا إلى الموقع الرسمي ومراجعة إعدادات الأمان.
- Ignore and change password later. | تجاهل الرسالة وتغيير كلمة المرور لاحقًا.

8. Assessment Screen Layout

- Use one centered white scenario card with a maximum readable width on desktop and full-width padded layout on mobile.
- Top row: 'Scenario X of 8' and a subtle progress percentage.
- Under it: a thin teal progress bar.
- Question text: strong visual hierarchy, comfortable line length, no threat-type label such as 'phishing', 'fake', 'rogue Wi-Fi', or 'malware' unless that word already appears in the supplied scenario itself.
- Choices: stacked clickable cards with radio indicators. Selected state = teal border + very light teal surface.
- Footer navigation: Previous on the left, Next on the right for English; mirrored for Arabic RTL.
- Disable Next until one answer is selected.
- For Scenario 8, change the primary action to 'Submit Assessment' / 'إرسال التقييم'.

9. Participant Result Page

The result page must feel rewarding, educational, and visually distinct from a survey confirmation page.

- Header: 'Your Cybersecurity Awareness Result' / 'نتيجة تقييم وعيك بالأمن السيبراني'.
- Show Participant Name if provided; otherwise show 'Anonymous'. Always show the generated Participant ID.
- Show the final score prominently.
- Show the final risk classification as one of: Low Risk, Medium Risk, High Risk.
- Use a large donut/ring visualization for the participant result. The center can display the score or risk level.
- Use semantic colors only after the assessment is complete: Low Risk = teal/green family, Medium Risk = amber, High Risk = muted coral/red.
- Add a short interpretation paragraph under the result.
- Show 'Assessment completed: 8/8'.
- Add a 'Review My Answers' section. Each scenario review card should show the selected answer, its interpretation, and educational feedback when available.
- Actions: 'Retake Assessment', 'Return Home', and optionally 'Print / Save Result' as a design placeholder.

10. Administrator Portal

10.1 Admin Login

- Separate from the participant journey.
- Full logo centered above a compact white login card.
- Fields: Admin Email / Username and Password.
- Primary button: 'Sign In'.
- Warm off-white background. No public registration link.

10.2 Admin Dashboard - Required Content

The dashboard should immediately answer: how many people completed the assessment, how results are distributed, which scenarios are most problematic, and who submitted assessments.

Top summary cards:

- Total Participants
- Completed Assessments
- Named Participants
- Anonymous Participants
- Average Score
- Low Risk percentage
- Medium Risk percentage
- High Risk percentage

Main dashboard analytics:

- Risk Distribution donut chart: Low Risk / Medium Risk / High Risk. Show percentages on or around the donut and show both count and percentage in the legend.
- Participation Type donut chart: Named / Anonymous.
- Recent Assessments table showing the latest submissions.
- Scenario Performance summary showing all eight scenarios and the percentage distribution of response choices. Use compact donut charts or circular percentage indicators rather than large bar charts.

10.3 Circular / Donut Chart Rules

- Charts should be modern donut charts with a clean white card, short title, total value or dominant percentage in the center, and a clear legend.
- Every legend item must show: category name, participant count, and percentage.
- Risk chart color mapping: Low Risk = teal/green; Medium Risk = amber; High Risk = muted coral/red.
- For scenario-response charts, use navy/teal/neutral variations and label answer choices clearly. Do not use misleading red/green correctness colors unless the chart explicitly represents risk interpretation after scoring.
- Do not use 3D pie charts.
- If a chart has too many labels, use a donut with an adjacent textual breakdown card.

10.4 Participants / Assessments Table

Create a searchable, filterable table. The display name must respect the participant's entry choice.

Column	Behavior
Participant	If a name was entered, show the name. Otherwise show 'Anonymous'.
Participant ID	Always show generated ID, e.g., CAG-0047.
Entry Type	Named or Anonymous.
Score	Final assessment score.
Risk Level	Low Risk / Medium Risk / High Risk.
Submitted At	Date and time.
Status	Completed / Incomplete if supported.
Action	View Details.

Filtering and actions:

- Search by participant name or Participant ID.
- Filter by risk level.
- Filter by Named / Anonymous.
- Sort by date or score.

- Export currently filtered results to CSV.

10.5 Participant Detail Page

- Show participant name if provided, otherwise 'Anonymous'.
- Show Participant ID, submission date/time, total score, and risk category.
- Show a compact result donut.
- Below it, show all eight scenarios as expandable cards.
- For each scenario show: scenario number, selected answer, score contribution if available, and feedback/interpretation if available.
- Provide Previous / Next participant navigation only in the admin portal.

10.6 Scenario Analytics Page

- Create a grid of eight analytics cards, one for each scenario.
- Each card should include: Scenario number, short neutral label for administrators, total responses, donut chart of answer-choice distribution, and a text breakdown of count + percentage for every option.
- Clicking a scenario opens a detailed view with the full bilingual question text and response distribution.
- Do not change the original scenario wording in the detail view.

10.7 Import / Export Page

- Design an admin-only panel for importing questionnaire CSV files.
- Show a drag-and-drop upload area and a clear file validation state.
- Show import summary cards: Total Rows, Accepted Rows, Excluded/Invalid Rows, Imported Assessments.
- Provide export actions for Participants, Assessments, Scenario Analytics, and Risk Distribution.
- This is a UI design requirement only. Do not define or invent backend scoring rules in Stitch.

11. Admin Navigation Structure

Desktop: left sidebar. Mobile/tablet: collapsible navigation drawer.

- Dashboard
- Participants
- Assessments
- Scenario Analytics
- Import / Export
- Settings
- Logout

12. Responsive Design Requirements

- Design desktop, tablet, and mobile states.
- Participant assessment must be optimized first for mobile.
- On mobile, keep question cards full width with 16-20 px outer padding.
- Do not compress answer text into two columns.
- On desktop, center participant cards and limit reading width.
- Admin tables should horizontally scroll or convert to responsive cards on narrow screens.
- Arabic mode must mirror navigation, icon placement, Previous/Next direction, and text alignment appropriately.

13. Accessibility and Interaction Requirements

- Do not rely on color alone to communicate selected, risk, or status states.
- Provide clear labels, icons, and text.
- Maintain strong text/background contrast.
- Use visible keyboard focus rings.
- Minimum comfortable touch target around 44px.
- Do not use low-contrast teal text for long body copy; reserve teal mainly for accents.
- Respect reduced-motion preferences in the eventual implementation.

14. Required Stitch Deliverables

- Produce a coherent multi-screen design system, not isolated unrelated screens.
- Show at least: Landing, Participant Entry, Consent, Instructions, one English scenario screen, one Arabic RTL scenario screen, Result page, Admin Login, Admin Dashboard, Participants Table, Participant Detail, Scenario Analytics, Import/Export.
- Reuse consistent components, spacing, typography, cards, buttons, icons, and chart styling across all screens.
- Use the attached CyberAwareGaza logo as the visual anchor for the product identity.
- Keep all content editable for later development handoff.

15. Things Stitch Must Not Do

- Do not redesign the supplied logo.
- Do not invent additional scenarios.
- Do not change any scenario translation or answer wording.
- Do not show the correct answer before the assessment is submitted.
- Do not make the participant register an account.
- Do not ask for email, phone number, university ID, or real credentials.
- Do not turn the experience into a long one-page survey.
- Do not use a generic dark hacker theme.
- Do not make charts decorative without labels, counts, and percentages.
- Do not hardcode placeholder statistics as if they are real study data.

16. Final Design Goal

The final product should feel like **a modern academic cybersecurity assessment platform** with a distinct Palestinian visual identity, not a survey form. The participant flow should be calm, focused, and easy. The administrator experience should be analytical, structured, and useful for reviewing participants, scores, risk levels, and scenario-level patterns.
